AI INTERIOR DESIGN PLATFORM

PRODUCT WALKTHROUGH

AI-Powered Interior Design Journey

From requirements to shopping — five product screens, one complete platform

01

AI Requirement Collection

A 12-step conversational intake that captures the full design brief.

02

AI Space Planning

Optimized 2D layout with movement flow, lighting, privacy and Vastu.

03

AI 3D Interior Design

Photorealistic, editable 3D renders with real materials and finishes.

04

AI BOQ & Cost Estimate

Itemized Bill of Quantities with live budget tracking and GST totals.

05

Shopping List & Order

Every item purchasable from verified suppliers in a single cart.

Reference Project

Used across all five screens

Project	3BHK Apartment
Area	1,450 sq.ft.
Family	4 Members + Pet
Style	Modern Minimal
Budget	Rs 12,00,000
AI Estimate	Rs 11,87,900
Status	Within Budget
Savings Found	Rs 62,100 (5.2%)

OVERVIEW

A guided, chat-style intake wizard that walks the customer through **12 quick steps** in under five minutes. The AI assistant collects everything a human designer would ask in a first consultation: property type and areas (1,450 sq.ft. carpet / 1,650 sq.ft. built-up), rooms to design, family composition (2 adults, 1 child, 1 pet), daily lifestyle habits, preferred design style (Modern), colour and material choices, and the budget (Rs 12 Lakh on a Rs 3–50 Lakh slider). The customer can also upload a floor plan (JPG/PNG/PDF), house photos, and videos before the AI produces a project summary and generates the design.

ON THIS SCREEN

- AI Summary
- Generate Design

WHAT THE AI DOES

- Converts a free-form conversation into a structured, machine-readable design brief.
- Uses lifestyle answers (WFH, puja room, shoe storage, kids room) to drive downstream layout decisions.
- Previews the full output pipeline: space planning, furniture layout, 3D design, materials, BOQ, cost estimate and shopping list.

WHY IT MATTERS

Replaces a 1–2 hour designer consultation with a 5-minute self-serve flow, capturing structured data that powers every later step and qualifies leads at near-zero cost.

AI Requirement Collection
Tell AI about your needs and let it create your dream space.

Hello! I am your AI Interior Assistant.
Let's design your dream home together.

1 Welcome
Welcome to AI Interior Planner
Let's design your dream home in just 5 minutes.
Start Project →

2 Property Details
Great! Let's start with your property details.
Property Type: Apartment, Villa, Independent House, Office, Shop
Carpet Area (sq.ft.): 1450
Built-up Area (sq.ft.): 1650
Number of Floors: 1
Next →

3 Room Details
Which rooms do you have? (Select all that apply)
Living Room, Dining Room, Kitchen, Master Bedroom, Bedroom 2, Bedroom 3, Bathroom, Balcony, Study Room, Office
Next →

4 Family Details
Tell me about your family.
Adults: 2
Children: 1
Senior Citizens: 0
Pets: 1

AI Output (Next Steps)
Space Planning → Furniture Layout → 3D Interior Design → Material Suggestions → BOQ → Cost Estimate → Shopping List
Your dream home is just one step away!

OVERVIEW

The AI turns the requirement brief and uploaded floor plan into an **optimized 2D layout** for the 3BHK. The dimensioned plan marks every room (Master Bedroom 13'0" x 12'0", Living 16'0" x 14'0", Kitchen with attached utility) with green movement-flow arrows and the entry point. A 9-room checklist tracks completion, a 2D/3D toggle switches views, and the AI explains its own reasoning in the suggestions panel — e.g. living room near the entry for easy access, bedrooms grouped in a private zone, kitchen connected to utility, balcony attached to the living area.

Privacy Zoning

Vastu Compliant

Space Utilization

3 Alternative Layouts

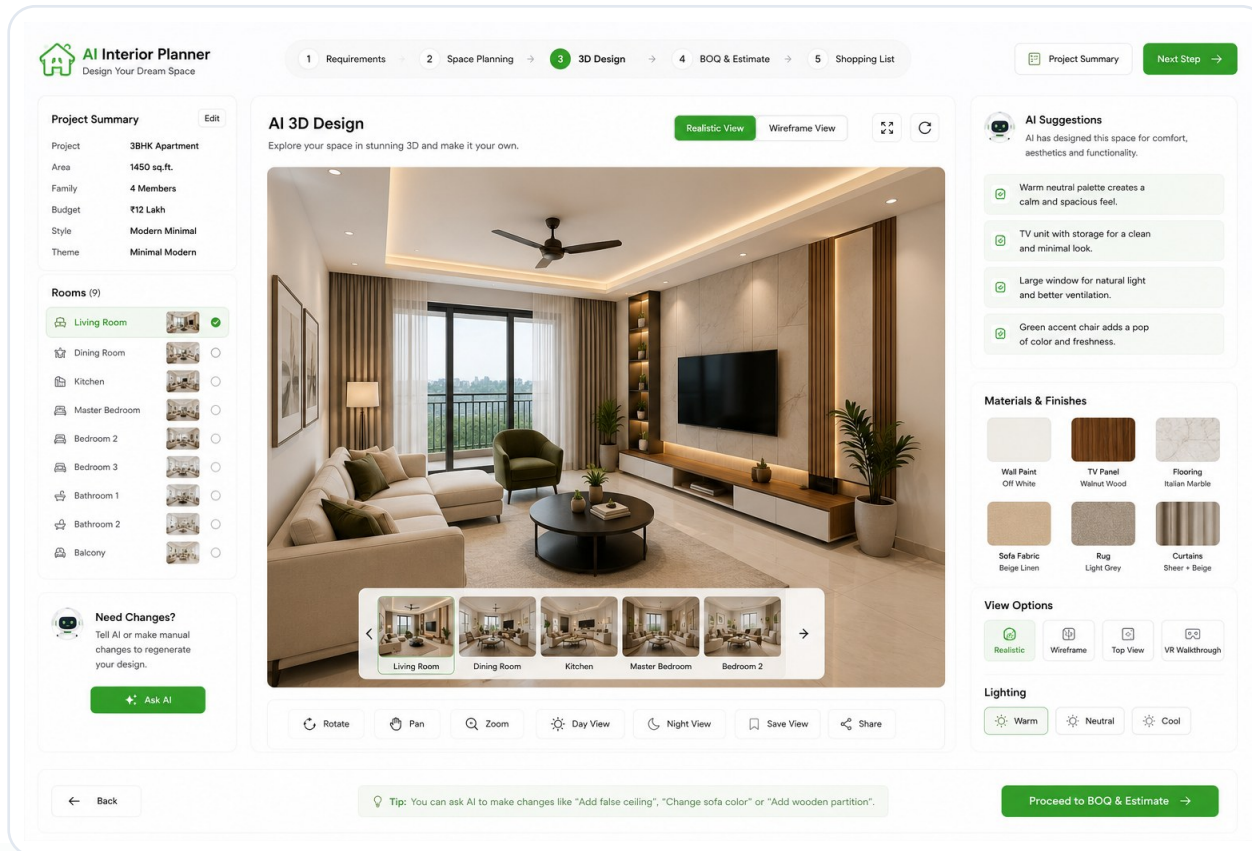

Manual Edit / Tell AI

WHAT THE AI DOES

- Generates the layout in seconds and scores it on five factors: movement flow, natural light, privacy, smart space utilization and Vastu.
- Offers three alternative AI-generated layout options for one-click comparison.
- Accepts plain-language edits ("Bigger kitchen", "Attached bathroom") alongside manual editing.

WHY IT MATTERS

Space planning is normally the slowest, most expert-dependent phase. Automating it with explainable AI suggestions builds trust and moves the customer to visualisation immediately.

OVERVIEW

The approved layout becomes a **photorealistic 3D render** the customer can walk through room by room via the thumbnail carousel. Controls include rotate, pan, zoom, day/night lighting, save view and share, with Realistic and Wireframe modes plus Top View and VR Walkthrough. The right rail exposes the exact materials the AI chose — off-white wall paint, walnut TV panel, Italian marble flooring, beige linen sofa, light-grey rug, sheer curtains — and explains design decisions like the warm neutral palette and the green accent chair.

Save & Share

WHAT THE AI DOES

- Renders every room in the customer's chosen style with a consistent material palette.
- Accepts natural-language change requests ("Add false ceiling", "Change sofa colour", "Add wooden partition") and regenerates.
- Every visible material maps to a real product SKU, keeping the render honest to the final estimate.

WHY IT MATTERS

Seeing the finished home before spending a rupee is the strongest conversion moment in interior design — and because materials are SKU-linked, the render doubles as a sales catalogue.

OVERVIEW

The design is decomposed into a **professional, room-wise Bill of Quantities**. The Living Room (Rs 1,85,400) itemises the TV unit, 3+2 sofa set, false ceiling (180 sq.ft. @ Rs 250), premium emulsion paint (350 sq.ft. @ Rs 35), lighting, curtains and labour; the Kitchen (Rs 2,45,600) covers the modular kitchen, quartz countertop, sink and auto-clean chimney. The cost summary donut splits spend across Furniture (34.7%), Material (27.1%), Labour (10.8%), Services, Electrical, Plumbing and Appliances. The Rs 11,87,900 estimate sits **within the Rs 12,00,000 budget** with Rs 12,100 remaining; adding 18% GST gives a grand total of Rs 13,80,900.

ON THIS SCREEN

- Category Filters
- Quantity / Unit / Rate
- Material Cost
- Labour Cost
- Electrical & Plumbing
- Budget vs Estimate
- Cost Donut Chart
- GST & Grand Total
- Export & Share BOQ
- Add Custom Item

WHAT THE AI DOES

- Auto-generates quantities and market rates for every line item straight from the 3D design.
- Recalculates the whole estimate live when the customer edits quantities, rates or items.
- Tracks the estimate against budget in real time and can suggest cheaper or premium alternates on request.

WHY IT MATTERS

A transparent, editable BOQ attacks the industry's biggest pain point — opaque contractor quotes — and creates a priced bill that flows directly into the marketplace.

OVERVIEW

The BOQ converts into a **ready-to-buy cart**: 48 items, 102 units, Rs 11,87,900 in total with Rs 62,100 (5.2%) of AI-found savings. Each card shows a product photo, category tag, room mapping, quantity and unit/total pricing, with wishlist and add-to-cart actions. Items are filterable by Furniture (16), Materials (12), Decor (8), Electrical (6) and Services (6). Verified suppliers — Urban Ladder (4.5), Pepperfry (4.3), Godrej Interio (4.6), Home Centre (4.4) — list delivery windows, backed by Best Price Guarantee, Quality Assured and Secure Payments badges. One tap adds everything to cart; "Place Order" completes a secure checkout.

WHAT THE AI DOES

- Maps every BOQ line to real, in-stock products from rated suppliers.
- Compares prices across the marketplace and surfaces budget-friendly or premium alternatives on request.
- Keeps quantities in sync with the BOQ, so design changes update the cart automatically.

WHY IT MATTERS

This screen closes the loop: the design journey ends in a transaction on BuildBazaarX's own marketplace, turning every AI design into GMV across furniture, materials and services.

One Journey. One Platform.

Every step feeds the marketplace: designs become BOQs, and BOQs become orders.
